### Course Convener and Lecturer:
- Ian McDermid, Lecturer in Statistics
- Research School of Finance, Actuarial Studies and Statistics (RSFAS)
- ANU College of Business and Economics (CBE)
- Room 3.08 (Level 3), CBE Building 26C
- 2 Kingsley Street, Acton

### Phone:
+61 2 612 51084 (just extension 51084 within ANU)

### Email:
ian.mcdermid@anu.edu.au

### Office hours for student consultation:
- Thursdays, 2pm to 4pm, or at other non-teaching times on Tuesdays, Wednesdays and Thursdays by prior appointment, made and confirmed via e-mail. Any changes to consulting times will be advised on Wattle.

### Research Interests
- I have over 30 years of experience in statistical consulting, research and university teaching. My current research interests are in: population health and mortality; sample survey analysis and design.

### Tutor
- Yang Yang, RSFAS PhD Student, Room 3.53 (CBE Building 26C)

### Email:
yang.yang@anu.edu.au

### Office hours for student consultation:
- Yang Yang will be available for consultations in room 3.09 (Level 3, CBE Building 26C) on Fridays, 1pm to 3pm.
- Any changes will be advised on Wattle.

### Student Administrator
- Tracy Skinner, RSFAS Office, 9am–5pm Mondays to Fridays
- Room 4.48 (Level 4), CBE Building 26C
- 2 Kingsley Street, Acton ACT 2601

### Phone:
+61 2 612 50487 (just extension 50487 within ANU)

### Email(s):
tracy.skinner@anu.edu.au or enquiries.fas@anu.edu.au
COURSE OVERVIEW

Course Description

STAT7030 is intended to introduce students to generalised linear modelling methods, with emphasis on, but not limited to, common methods for analysing categorical data. Topics covered include a review of multiple linear regression and the analysis of variance, log-linear models for contingency tables, logistic regression for binary response data, Poisson regression, model selection and model checking, mixed effects models and some additional topics to be agreed with students. The R statistical computing package is used as an integral part of the course.

Prerequisites

This is a course in applied statistics, using numerous examples, rather than a course in mathematical statistics; but it is NOT an introductory first course in either statistical modelling or basic statistics. We assume you have already completed a course such as STAT6038 Regression Modelling as an essential prerequisite AND that you have also completed the equivalent of an introductory course in basic statistics (such as STAT7055) that is an essential prerequisite to the STAT6038 course.

Unfortunately, it will NOT be possible to waive the prerequisite for this course. It is strict Research School of Finance, Actuarial Studies and Applied Statistics (RSFAS) policy that pre-requisites for all courses be enforced. In RSFAS, course lecturers do not have the ability to waive pre-requisites or action enrolment variations.

The course uses the R statistical package, which uses matrix algebra to implement the linear modelling techniques. An understanding of matrix algebra (equivalent to an introductory mathematics course such as MATH1113) would be helpful in understanding how the R routines work, but such knowledge is not a required prerequisite nor an examinable part of this course.

Co-teaching

STAT7030 and the equivalent undergraduate (STAT3015) and honours courses (STAT4030) share the same lecture content and assignments, but will have separate tutorials and different final examinations. The different cohorts of students will also be treated separately in grading and any scaling that is applied.

Learning Outcomes

Upon successful completion of the requirements for this course, students should have the knowledge and skills to:

1. Explain in detail the role of generalised linear modelling techniques (GLMs) in modern applied statistics and implement methodology.
2. Demonstrate and in-depth understanding of the underlying assumptions for GLMs and perform diagnostic checks; appreciate potential problems.
3. Perform statistical analysis using statistical software in addition to learning the underlying theory and methodologies.
4. Achieve a higher working-level understanding of the statistical techniques used (beyond ideas and processes involved).

Research-Led Teaching
My teaching in this introductory course in statistical modelling will draw on numerous examples from my extensive experience in applied statistical research and consulting.

Feedback
Staff Feedback
You will be given individual feedback by your tutor, who will mark your assignments. Solutions to the assignments will be provided on Wattle and discussed in tutorials and/or lectures.

You are also welcome to ask questions of me or the tutor at consultations or during classes. If you wish to ask me questions immediately following a lecture, please wait for me outside the lecture theatre, so that I can clean-up and log-off in preparation for the next class that will be using the same venue.

I am also happy to answer SHORT questions on the course material sent via email or posted on Wattle. If you send me a question via email, I will (unless you specifically ask me not to) post your question (anonymously) and my answer on Wattle for the benefit of all students.

Student Feedback
ANU is committed to the demonstration of educational excellence and regularly seeks feedback from students. One of the key formal ways students have to provide feedback is through Student Experience of Learning Support (SELS) surveys. The feedback given in these surveys is anonymous and provides the Colleges, University Education Committee and Academic Board with opportunities to recognise excellent teaching, and opportunities for improvement.

For more information on student surveys at ANU and reports on the feedback provided on ANU courses, go to

http://unistats.anu.edu.au/surveys/selt/students/ and  
http://unistats.anu.edu.au/surveys/selt/results/learning/

Communication
Email
If I, or anyone in the School, College or University administration, need to contact you, we will do so via your official ANU student email address, which you need to check regularly. Information about your enrolment and fees from the Registrar and Student Services’ office will also be sent to this email address.

Announcements
Students are expected to check the Wattle site for announcements about this course, e.g. changes to timetables or notifications of cancellations. Notifications of emergency cancellations of lectures or tutorials will be posted on the door of the relevant room.

Other Course URLs
More information about this course may be found on:
• CBE website (http://cbe.anu.edu.au/students/student-information/college-courses/) and
• ANU Programs and Courses (http://programsandcourses.anu.edu.au/course/STAT3015)

Support for Students
The University offers a number of support services for students. Information on these is available online from http://www.anu.edu.au/students.
Resources

Class materials, including detailed lecture notes, slides, instructions on how to access R, lecture demonstrations, tutorials, assignments and other relevant materials, will be made available on the class web page on Wattle (https://wattle.anu.edu.au), the University's online learning environment. **It is essential that you visit the class web page regularly.**

To log on to Wattle, you need to have your ANU ID (student number) and password. In order to access the class web page within Wattle, you will need to be formally enrolled in the course. All three of the related courses (STAT3015, STAT4030 and STAT7030) share the same Wattle web page.

Prescribed and Recommended Texts

As we have a lot of detailed course material already available, there is NO prescribed text for this course. However, I will post on Wattle a list of recommended references for supplementary reading.

I may recommend other references during the course and possibly also make additional material available in the library e-Reserve. Use the following link to find course-related material in the ANU library: http://library.anu.edu.au/search/r?SEARCH=STAT7030

Technology and Software

The application of modern statistical techniques requires familiarity with some statistical computing package and the assignments for this course will require some data analysis on a computer.

This course makes extensive use of the R computing package, which is freely available to download at http://www.r-project.org. Further instructions on R, including a series of "getting started" workshops will be made available on the Wattle site for this course. R is also available on all InfoCommons computers on the ANU campus. All tutorials for this course will be held in one of the InfoCommons PC computer laboratories, though you may also find it helpful to also bring a laptop with R installed to the tutorials.

Examination Equipment

You will also need access to a scientific calculator for the Final Examination.

Tutorial/Seminar Registration

Tutorial signup for this course will be done via the Wattle site. Detailed information about signup times will be provided on Wattle or during the first lecture. When tutorials are available for enrolment, follow these steps:

1. Log on to Wattle, and go to the course site.
2. Click on the link “Tutorial enrolment”.
3. On the right of the screen, click on the tab “Become Member of ……” for the tutorial class you wish to enter.
4. Confirm your choice.

If you need to change your enrolment, you will be able to do so by clicking on the tab “Leave group…” and then re-enrol in another group. You will not be able to enrol in groups that have reached their maximum number. Please note that enrolment in ISIS must be finalised for you to have access to Wattle.
### COURSE SCHEDULE

<table>
<thead>
<tr>
<th>Week</th>
<th>Summary of Lecture Topics/Activities</th>
<th>Tutorials / Assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 (25 July)</td>
<td>Introduction. Revision of basic R. Revision of topics in multiple regression.</td>
<td>Regular weekly tutorials commence</td>
</tr>
<tr>
<td>2 (1 August)</td>
<td>Analysis of variance (ANOVA) models. Introduction to random effects.</td>
<td></td>
</tr>
<tr>
<td>3 (8 August)</td>
<td>Analysis of covariance (ANCOVA) models.</td>
<td></td>
</tr>
<tr>
<td>4 (15 August)</td>
<td>Modelling binary data with logistic regression. Introduction to GLM framework.</td>
<td></td>
</tr>
<tr>
<td>5 (22 August)</td>
<td>GLMs: model specification, link functions, likelihood inference.</td>

<td>Parameter estimation and interpretation.</td>
<td>Wattle MS Quiz Assignment 1 due</td>
</tr>
<tr>
<td>7 (19 September)</td>
<td>Analysis of deviance and residual diagnostics.</td>
<td>Assignment 1 solutions</td>
</tr>
<tr>
<td>8 (26 September)</td>
<td>Variable selection for GLMs.</td>
<td></td>
</tr>
<tr>
<td>9 (4 October)</td>
<td>Modelling binomial proportions and counts. Odds ratios and contingency tables.</td>
<td></td>
</tr>
<tr>
<td>10 (10 October)</td>
<td>Poisson GLMs and over-dispersion.</td>
<td></td>
</tr>
<tr>
<td>11 (17 October)</td>
<td>Additional topics if time permits: multinomial logistic regression, ordinal response models, mixed effects models in hierarchical data.</td>
<td>Assignment 2 due</td>
</tr>
<tr>
<td>12 (24 October)</td>
<td>Revision for Final Examination.</td>
<td>Assignment 2 solutions</td>
</tr>
<tr>
<td>(2 to 18 November)</td>
<td>Examination period</td>
<td>Final Examination</td>
</tr>
</tbody>
</table>

The bulk of the course material will be covered in the two-hour lecture on Tuesdays. In 2017, we will be experimenting with new ways of reinforcing this basic material using the one-hour lecture on Thursdays. Exactly what will be covered in the Thursday lecture will be announced in advance each week on Wattle.

### ASSESSMENT REQUIREMENTS

<td>Results released 30 November</td>
</tr>
</tbody>
</table>

**Wattle Quiz**

An (optional) short quiz will be made available on Wattle for you to complete in week 6, closing at 5pm on Thursday, 31 August 2017. Marks for this quiz will be redeemable on Assignment 1; which will be worth 20%, if your marks for Assignment 1 are better than your results on the quiz.

**Assignment 1 (ANOVA and ANCOVA models) and Assignment 2 (GLMs)**

Detailed assignment specifications will be handed out at least three weeks prior to the due dates. Assignments will involve using R to analyse data from a case study, then organising and editing the R output and preparing a written report on your analyses.
Assessment Requirements continued

Assignment Submission
In 2017, we will be trialling ONLINE submission via the course Wattle site. For online submission, the ANU is using Turnitin to enhance student citation and referencing techniques, and to assess assignment submissions as a component of the University's approach to managing Academic Integrity. For additional information regarding Turnitin please visit the ANU Online website.

Students may choose not to submit assessment items through Turnitin (or we may discontinue the trial for Assignment 2). In this instance you will be required to submit your assignment report and copies of all references included in the assignment report in HARD COPY to the appropriate box at the RSFAS School Office by the due date. Submitted assignments must include a completed version of the cover sheet provided on Wattle. For hard copy submissions, please remember to include your student ID on the cover sheet and keep a copy of the assignment for your records.

As a further academic integrity control, students may be selected for a 15-minute individual oral examination of their written assessment submissions. Any student identified, either during the current semester or in retrospect, as having used ghost writing services will be investigated under the University’s Academic Misconduct Rule.

Extensions and Penalties
Extensions and late submission of assessment pieces are covered by the Student Assessment (Coursework) Procedure.

The Course Convener may grant extensions for the assignments but not for examinations. If you need an extension, you must request it in writing on or before the due date. If you have documented and appropriate medical evidence that demonstrates you were not able to request an extension on or before the due date, you may be able to request it after the due date.

Extensions will generally NOT be granted unless there is a compelling reason. No extensions will be granted after the solutions have been released/discussed and/or marked assignments have been returned to other students (the due date may NOT be extended after the estimated return date shown above).

No submission of assignments after the due date (without an extension) will be permitted. If an assignment is not submitted by the due date, a mark of 0 (zero) will be awarded.

Note this is an applied statistics course and the assignments represent an opportunity for you to show that you can correctly apply the statistical modelling techniques. As a result, the assignments are compulsory and assignment marks are NOT redeemable on the final examination.

Returning Assignments and Resubmission
Assignments will be marked to a commonly agreed marking schedule by your tutor and returned to you in tutorials.

Assignment solutions will be discussed in the tutorials in the first teaching week following the due date or when marked assignments are returned and there will be no resubmission of assignments.

Referencing Requirements
All submitted assessment should be your own work, except where group work has been agreed and included in the detailed assignment specifications. All outside sources should be clearly referenced as per the ANU College of Business and Economics standards: http://www.cbe.anu.edu.au/current-students/policies/examinations-assessment/.
Assessment Requirements continued

Final Examination
Permitted materials and other conditions for the Final Examination will be discussed with students and the outcome advised on Wattle. The Final Examination will be centrally timetabled and the details released via http://timetable.anu.edu.au/.

Scaling
Your final mark for the course will be based on the raw marks allocated for each of your assessment items. However, your final mark may not be the same number as produced by that formula, as marks may be scaled. Any scaling applied will preserve the rank order of raw marks (i.e. if your raw mark exceeds that of another student, then your scaled mark will exceed or be the same as the scaled mark of that student), and may be either up or down.

Policies
ANU has educational policies, procedures and guidelines, which are designed to ensure that staff and students are aware of the University’s academic standards, and implement them. You can find the University’s education policies and an explanatory glossary at: http://policies.anu.edu.au/ (follow the side links to the Teaching and Learning policies).

Students are expected to have read the Academic Misconduct Rule 2015 before the commencement of their course.

Other key policies include:
- Student Assessment (Coursework) Policy
- Student Surveys and Evaluations

Privacy Notice
The ANU has made a number of third party, online, databases available for students to use. Use of each online database is conditional on student end users first agreeing to the database licensor’s terms of service and/or privacy policy. Students should read these carefully.

In some cases, student end users will be required to register an account with the database licensor and submit personal information, including their: first name; last name; ANU email address; and other information.

In cases where student end users are asked to submit ‘content’ to a database, such as an assignment or short answers, the database licensor may only use the student’s ‘content’ in accordance with the terms of service – including any (copyright) licence the student grants to the database licensor.

Any personal information or content a student submits may be stored by the licensor, potentially offshore, and will be used to process the database service in accordance with the licensors terms of service and/or privacy policy.

If any student chooses not to agree to the database licensor’s terms of service or privacy policy, the student will not be able to access and use the database. In these circumstances students should contact their lecturer to enquire about alternative arrangements that are available.
